Threat Actors and Adversaries: Understanding Threat Intelligence and CERTs

Introduction

In today's rapidly evolving cybersecurity landscape, organizations face a wide range of threats from various actors and adversaries. Effective defense relies on comprehensive threat intelligence and coordinated response efforts. This document explores the sources of threat intelligence, the critical roles played by Computer Emergency Response Teams (CERTs), and the importance of private threat intelligence platforms.

1. Threat Intelligence: Overview

Threat intelligence is the process of collecting, analyzing, and sharing information about current and emerging cyber threats, including the tactics, techniques, and procedures (TTPs) of adversaries.

Major Sources of Threat Intelligence

Open Source Intelligence (OSINT)

- Publicly accessible information such as blogs, research reports, and security advisories.
- Provides insights into the latest threats and attacker techniques.

Internal Threat Data

- Data gathered from an organization's own security monitoring and incident response activities.
- Helps identify patterns and behaviors specific to threats targeting the organization.

Closed Source Intelligence

- Information from private intelligence providers and government agencies.
- Offers detailed, often proprietary insights into threat actors and their methods.

CYVITRIX LEARNING

2. The Role of CERTs (Computer Emergency Response Teams)

CERTs are dedicated expert groups focused on managing and responding to cybersecurity incidents. They are central to organizational and national cybersecurity efforts.

Key Functions of CERTs

Timely Alerts and Reports

- Issue real-time notifications about emerging threats, vulnerabilities, and incidents.
- Enable organizations to respond quickly to new risks.

Vulnerability Advisories

- Provide detailed information about newly discovered vulnerabilities in software and hardware.
- Include impact assessments and recommended mitigation steps.

Threat Analysis

- Conduct in-depth examinations of malware, phishing campaigns, and other cyberattacks.
- Share findings with the cybersecurity community to enhance collective defenses.

Best Practices and Guidelines

- Offer recommendations for improving cybersecurity postures.
- Help organizations reduce their risk exposure through effective security measures.

Coordination and Collaboration

- Work with government agencies, private sector entities, and international partners.
- Enhance information sharing and collective threat response.

Training and Awareness

- Deliver educational programs to build knowledge of threats and defensive measures.
- Foster a more informed and resilient cybersecurity community.

Incident Response Support

- Assist organizations during and after security incidents.
- Help with containment, investigation, recovery, and post-incident analysis.

CYVITRIX LEARNING

Facilitation of Threat Intelligence Exchange

- Enable sharing of cyber threat information across organizations, sectors, and countries.
- Strengthen overall security through shared knowledge and experience.

Notable CERTs

US-CERT: Protects the United States' critical infrastructure with cybersecurity information, alerts, and coordination.

CERT-EU: Safeguards IT infrastructure for European Union institutions against cyber threats.

CERT-UK: Provides guidance, coordination, and support to organizations across the United Kingdom.

3. Private Threat Intelligence Platforms

Private platforms supplement CERTs by offering advanced, actionable threat intelligence tailored to organizational needs.

Key Providers and Their Offerings

FireEye Mandiant

- Renowned for incident response and in-depth threat intelligence reports.
- Advanced detection and response capabilities.

CrowdStrike

- Integrates threat intelligence into its Falcon endpoint protection platform.
- Offers threat hunting and incident response services.

Recorded Future

- Utilizes machine learning and natural language processing for real-time threat intelligence and risk analysis.

Palo Alto Networks Unit 42

- Provides threat intelligence, incident response, and threat hunting services through its research division.

Anomali

- Delivers a threat intelligence platform with feeds, analysis, and integration with security tools.

CYVITRIX LEARNING

IBM X-Force

- Offers threat reports, vulnerability analysis, and incident response through its specialized research team.

4. Importance of Coordination and Collaboration

- Both CERTs and private platforms are essential for a robust cybersecurity posture.
- Sharing threat intelligence across different organizations and countries enhances overall security.
- Leveraging the expertise and resources of both public and private entities enables organizations to stay ahead of emerging threats.

Summary

A strong cybersecurity defense is built on comprehensive threat intelligence and coordinated incident response. CERTs provide essential alerts, advisories, analysis, and support, while private threat intelligence platforms offer advanced, actionable insights. By utilizing both sources and fostering collaboration, organizations can better detect, analyze, and respond to evolving cyber threats, significantly reducing their risk exposure.

Threat Intelligence and CERTs: Understanding Threat Actors and Adversaries

Questions

1. Which of the following best describes open source intelligence (OSINT) in the context of threat intelligence?

A) Intelligence gathered exclusively from private vendors

B) Publicly available information such as blogs, reports, and advisories

C) Data collected from an organization's internal security systems

D) Intelligence shared only between government agencies

B

2. What is the primary function of a Computer Emergency Response Team (CERT)?

A) Developing new cybersecurity software

B) Managing and responding to cybersecurity incidents

C) Selling threat intelligence reports to the public

D) Regulating internet traffic

B

3. Which type of intelligence is collected from an organization's own security monitoring and incident response activities?

A) Closed source intelligence

B) Open source intelligence

C) Internal threat data

D) External threat feeds

C

CYVITRIX LEARNING

4. What is one crucial role of CERTs in supporting organizations?

A) Issuing software licenses

B) Providing timely reports and alerts on emerging threats

C) Designing hardware components

D) Regulating employee access

B

5. Closed source intelligence typically comes from which sources?

A) Public blogs and advisories

B) Social media posts

C) Private threat intelligence providers and government agencies

D) Company press releases

C

6. What is a key benefit of CERTs sharing their threat analysis findings with the broader cybersecurity community?

A) Lowering organizational costs

B) Improving collective understanding and response capabilities

C) Increasing government regulation

D) Reducing hardware requirements

B

7. Which of the following services is NOT typically provided by CERTs?

A) Vulnerability advisories

B) Threat analysis

C) Selling cybersecurity insurance

D) Incident response support

C

8. The United States Computer Emergency Readiness Team (US-CERT) primarily focuses on:

CYVITRIX LEARNING

A) Protecting the IT infrastructure of EU institutions

B) Providing cybersecurity information and coordination for US critical infrastructure

C) Guiding private security vendors in Asia

D) Developing antivirus software

B

9. Which private threat intelligence platform is known for using machine learning and natural language processing to analyze data from various sources?

A) FireEye Mandiant

B) IBM X-Force

C) CrowdStrike

D) Recorded Future

D

10. Palo Alto Networks Unit 42 provides threat intelligence primarily through:

A) Their insurance division

B) Their research division

C) Government advisories

D) Public press releases

B

11. Anomali's threat intelligence platform helps organizations by:

A) Providing entertainment content

B) Detecting, investigating, and responding to threats

C) Manufacturing hardware equipment

D) Regulating network speeds

B

12. CERTs contribute to cybersecurity by offering best practices and guidelines aimed at:

A) Increasing internet speeds

B) Improving organizational cybersecurity posture

CYVITRIX LEARNING

C) Designing new operating systems

D) Monitoring employee productivity

B

13. Which of the following is a responsibility of CERTs during and after security incidents?

A) Contain, investigate, and help recover from attacks

B) Develop new social media platforms

C) Write new programming languages

D) Create web content for marketing

A

14. The CERT EU team is primarily responsible for:

A) Providing global cybersecurity insurance

B) Protecting EU institutions' IT infrastructure from cyber threats

C) Investigating crime scenes

D) Managing Asia-Pacific internet traffic

B

15. What is a major advantage of private threat intelligence platforms for organizations?

A) They replace the need for CERTs

B) Provide detailed and actionable threat intelligence

C) Focus only on physical security issues

D) Eliminate the need for any internal security teams

B

16. CrowdStrike is best known for:

A) Endpoint protection and threat intelligence within its Falcon platform

B) Social media monitoring tools

C) Hardware manufacturing

D) Providing government regulations

CYVITRIX LEARNING

A

17. Which of the following is NOT a function of CERTs highlighted in the lecture?

A) Training and awareness programs

B) Coordinating with international partners

C) Selling personal data online

D) Providing incident response support

C

18. IBM X-Force delivers threat intelligence through:

A) Direct hardware sales

B) Its research team, providing reports and incident response

C) Online gaming platforms

D) Social media campaigns

B

19. Why is coordination and collaboration with other cybersecurity entities essential for CERTs?

A) To increase IT spending

B) To enhance the sharing of threat intelligence and strengthen defense

C) To promote hardware upgrades

D) To advertise new products

B

20. What is the main goal of exchanging cyber threat intelligence between organizations, sectors, and countries?

A) To reduce competition in the cybersecurity sector

B) To enhance overall security by leveraging shared knowledge and experiences

C) To raise prices for cybersecurity services

D) To limit the use of cloud computing

Answers and Explanations

1. **Answer: B** - Explanation: OSINT refers to publicly available information, such as blogs and security advisories.

---

2. **Answer: B** - Explanation: CERTs focus on managing and responding to cybersecurity incidents.

---

3. **Answer: C** - Explanation: Internal threat data is gathered from an organization's own monitoring and incident response.

---

4. **Answer: B** - Explanation: CERTs provide timely alerts and reports on threats and vulnerabilities.

---

5. **Answer: C** - Explanation: Closed source intelligence is sourced from private providers and government agencies.

---

6. **Answer: B** - Explanation: Sharing findings improves the collective response of the cybersecurity community.

---

7. **Answer: C** - Explanation: Selling insurance is not a typical CERT function; the others are.

---

8. **Answer: B** - Explanation: US-CERT's mission is to protect US critical infrastructure through information and coordination.

---

9. **Answer: D** - Explanation: Recorded Future uses ML and NLP for real-time threat intelligence.

---

10. **Answer: B** - Explanation: Unit 42 is Palo Alto Networks' research division providing threat intelligence.

CYVITRIX LEARNING

11. **Answer: B** - Explanation: Anomali assists organizations in detecting, investigating, and responding to threats.

---

12. **Answer: B** - Explanation: CERTs' best practices aim to improve cybersecurity posture.

---

13. **Answer: A** - Explanation: CERTs assist with incident response by containing, investigating, and helping recovery.

---

14. **Answer: B** - Explanation: CERT EU focuses on protecting EU institution IT infrastructure.

---

15. **Answer: B** - Explanation: Private platforms provide detailed, actionable intelligence to organizations.

---

16. **Answer: A** - Explanation: CrowdStrike's Falcon platform is known for endpoint protection and threat intelligence.

---

17. **Answer: C** - Explanation: Selling personal data is not a CERT function.

---

18. **Answer: B** - Explanation: IBM X-Force provides intelligence via its research team with reports and incident response.

---

19. **Answer: B** - Explanation: Coordination enhances threat intelligence sharing and strengthens defense.

---

20. **Answer: B** - Explanation: The main goal is to enhance security by leveraging shared knowledge and experience.
